Class 9: Structural Bioinformatics 1

Chloe Do

1. The RCSB Protein Data Bank (PDB)

Protein structures by X-ray crystalography dominate this database. We are skipping Q1-Q3 because the website was too slow for us.

2. Visualizing the HIV-1 protease structure

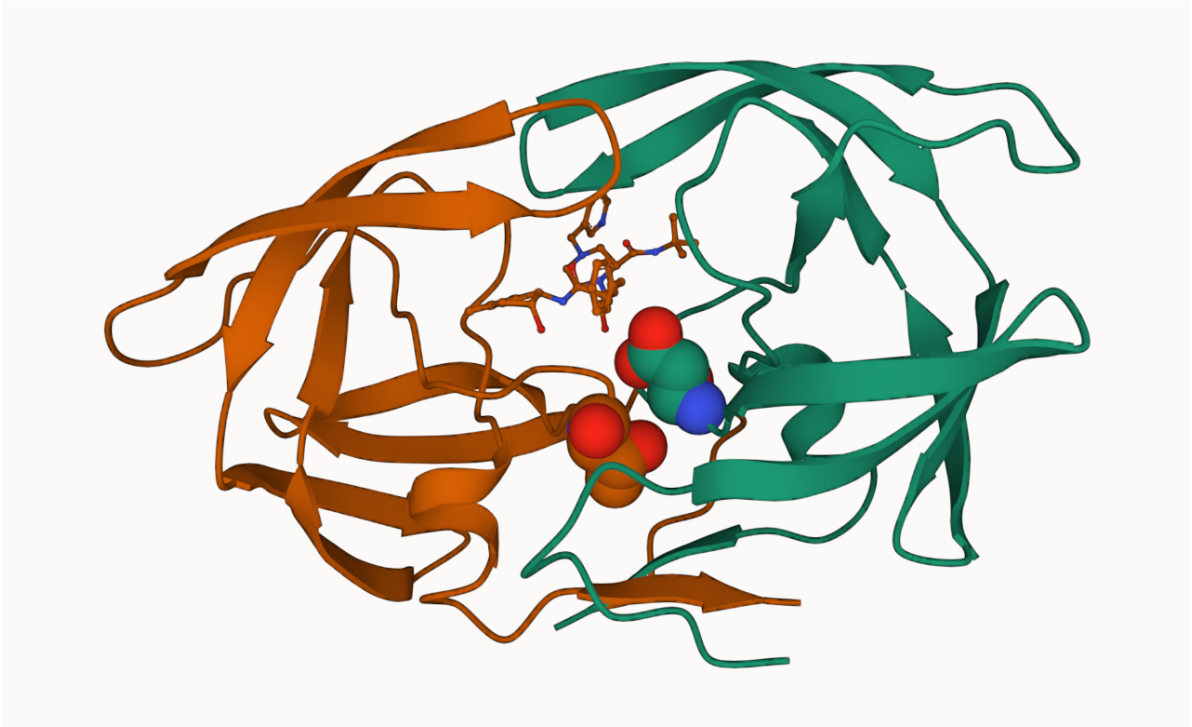

Figure 1: HIV-Pr structure from 1hsg

> Q4: Water molecules normally have 3 atoms. Why do we see just one atom per water molecule in this structure?

Because the hydrogen atoms are so small that with this high resolution, we cannot visualize them in the image.

> Q5: There is a critical "conserved" water molecule in the binding site. Can you identify this water molecule? What residue number does this water molecule have?

The water is located between the ligand and binding site. HOH 308

> Q6: Generate and save a figure clearly showing the two distinct chains of HIV-protease along with the ligand. You might also consider showing the catalytic residues ASP 25 in each chain (we recommend "Ball & Stick" for these side-chains). Add this figure to your Quarto document.
>
> Discussion Topic: Can you think of a way in which indinavir, or even larger ligands and substrates, could enter the binding site?

One way that indinavir or even larger ligands and substrates could enter the binding site is to make the polymers more flexible so that it could allow them to enter. We can also break bonds to make the protein smaller that could allows them to enter.

3. Introduction to Bio3D in R

Bio3D is an R package for structural bioinformatics. To use it we need to call it up with the `library()` function

```
library(bio3d)
```

To read a PDB file we can use `read.pdb()`

```
pdb <- read.pdb("1hsg")
```

```
Note: Accessing on-line PDB file
```

```
pdb
```

```
 Call:  read.pdb(file = "1hsg")

```

Q7: How many amino acid residues are there in this pdb object?

198

Q8: Name one of the two non-protein residues?

MK1

Q9: How many protein chains are in this structure?

2

4. Comparative structure analysis of Adenylate Kinase

```
# Install packages in the R console NOT your Rmd/Quarto file

#install.packages("ggrepel")
#install.packages("devtools")
#install.packages("BiocManager")

#BiocManager::install("msa")
#devtools::install_bitbucket("Grantlab/bio3d-view")
```

Q10. Which of the packages above is found only on BioConductor and not CRAN?

msa

Q11. Which of the above packages is not found on BioConductor or CRAN?:

bio3d-view

Q12. True or False? Functions from the devtools package can be used to install packages from GitHub and BitBucket?

TRUE

Compare analysis of Adenylate kinase (ADK)

We will start our analysis with a single PDB id (code from the PDB database): 1AKE

First we get its primary sequence:

```

```

```
Warning in get.seq("1ake_a"): Removing existing file: seqs.fasta
